

**MAIL SEQUENCE-SORTING CASE WITH MULTI-BAG
INSERTS AND METHODS OF SORTING**

ABSTRACT

5 A mail case system facilitates sequence-sorting various types of mail together into individual bags that each represent delivery points. The mail case uses multi-bag inserts so that bags for a number of stops can be set up for sorting. At the end of the sorting operation, the entire insert may be pulled down from the case as a single unit to maintain the established delivery point sequence.
